- 5. *Breynia disticha* 'Rosea Picta'
- 6. *Heliotrope* 'Marine'
- 7. *Salvia leucatha* 'White Mischief'
- 8. *Verbena* 'Chambray Royale'

This year's seasonal horticulture display focuses on the concept of sensory gardens. A sensory garden is designed with the purpose of stimulating the senses, engaging one's senses of sight, smell, touch, taste, and hearing. These types of gardens are especially popular with, and beneficial to, both children and adults who have sensory processing disorders, but also have benefits for everyone. Taste, touch, smell, sound, and visual elements all add to the experience of being in a garden and the exploration of the senses can help bring relaxation to any individual experiencing stress.

These gardens are designed to encourage patrons to explore in ways beyond sight. Fragrant roses, agastache, lavender, and sage create a distinct aroma. The sounds of bees and gently blowing grasses distract you from the noise of the city while soft celosia and gomphrena provide new textures. A variety of herbs and culinary plants are on display for further inspiration.

KNOT GARDEN
HORT HIGHLIGHT
SUMMER 2019

1
